

Capital project underway...?

- Have you considered in detail how the school grounds can support learning and play more effectively?
- Are you planning any capital expenditure in your playground?
- Do you have plans for school extension or temporary classrooms?

Many building projects miss key opportunities to improve the grounds with little or no extra cost. Some projects, inadvertently, cause unforeseen problems for playtimes. As specialists in school grounds and early years we can help you to maximise the benefits from your capital projects.

Even if your project is well underway there is value in an advisory visit to review plans and options. If it is already on-site then we can sometimes suggest changes that avoid unforeseen negative impact. Ideally of course we have a conversation early in the planning stages to ensure maximum benefit.

We offer a unique combination of landscape architecture and education experience over 30 years.

Contact us today to discuss how we can help you.

NB – FREE fundraising support and bid writing for larger capital projects

You combine the creative skill of a landscape architect with a deep understanding of how children interact physically, intellectually, emotionally and spiritually with the natural world. The best teachers are able to see the world through a child's eyes- and this is the reason I wanted you to lead our outdoor classroom project"

'I would never have thought of that solution!'

'Your 'big picture' overview and grounds briefing was very helpful to guide the project.'

'I was too bogged down in the detail to see these opportunities.'

'You really supported me in conversations with the project manager and you understood our school needs.'

'Your experienced eye helped us to avoid an expensive mistake.'

This is typical feedback from head teachers and governors
